

Electra-Pay, *The Smarter Way*

What Is E-Pay?

Electra-Pay is a free, easy to use, payment system that utilizes a new type of peer-to-peer money exchange called 'blockchains'. These blockchains are composed of networks of computers that all work together to send and receive little bits of money we call Electra.

What does Electra do?

Electra (ECA) is worth money because it is money! It can be sent to anyone around the globe in *less than a second* for payments, or you can use it to buy things or sell it for regular cash.

What makes E-pay Different?

Transactions are instantaneous. So what, your payment system does that already, right? How about 90 seconds for *full transaction verification* and almost no fees to boot.

Ok, you're joking right?

Not at all, **Electra** combined with **E-Pay** provides a basically fee-less service to users as well as businesses while also offering 90 second full verifications for instant transactions *anywhere* around the world. Fees are only paid by the sender, the receiver owes nothing.

Details

Minimal Fees - 0.00001 ECA Per Transaction

The fees associated with Electra E-Pay are virtually nothing. The very minimal fees that do exist, are there to ensure the payment reaches the appropriate destination and is collected by users, like you, by leaving their wallets running, allowing your computer to act as a link on a chain to confirm transactions for others. Our minimum fee for senders is 0.00001 ECA, (ECA stands for Electra), this means it would take over 100,000 payments from a single person to rack up a cost of 1 Electra (ECA). Customers won't even notice and your businesses will have a truly fee-less payment system.

Fast Verification - Completely Spendable Within ± 90 seconds

Typical transactions are verified by the Electra network within ± 90 seconds, as opposed to your typical 24 hours for the average payment system. This means you get your payments faster, and can spend them at your pace without having to wait for the dreaded 'pending transaction' to disappear or those scary emails from a bank because of a fraudulent online order.

Instant Transactions - Within Milliseconds, Globally.

Transaction speed from sender to receiver typically takes a few milliseconds for the network to process. Other competitors advertise anywhere from seconds to *hours* for transactions to appear while sometimes going offline for hours because of outages, for Electra, this a thing of the past. The Electra blockchain system will deliver your payments within the blink of an eye allowing complete comfort when receiving payments with Electra. In today's world money should be Fast, Secure, Inexpensive & Easy to use so join Electra today along with millions of other users and experience the smarter way to pay.
